vsmGadgetServer Release 5.6.3.155

Author: STB
Last updated: 2026-04-30
Release Date: 2026-04-30

This Release introduces new driver implementations, enhancements, and/ or fixes for the vsmGadgetServer application. Please consult the changelog for additional details.

Please note that vsmGadgetServer 5.6.3 and higher requires basic authentication (local windows user login) to access the configuration UI.

Also starting with vsmGadgetServer release 5.6.3.107, new created Ember+ providers will have the "Single Binding" mode enabled by default. This means that the provider will only send one binding at a time to the vsmGadgetServer. Also, the binding alias will not be sent, so the root node of the consumer will become the root node of the provider! Please note that future versions may enforce a single Consumer<>Provider binding, therefore the exclusive use of "Single Binding" mode is strongly recommended!

Including

- **ClearCom HCI [2.0.38.0]**
 - [RNDVSM- 51252] Fixed reported bug with conference offsets.
- **Sony CNA-2 [1.0.7.0]**
 - Worked on reported issue where the driver could not be loaded properly. This was caused by incompatibility of a dependency of the CNA-2 driver with other dependencies used by other drivers.
 - Worked on reported unnecessary matrix updates.
- **Riedel RRCS [1.1.20.0]**
 - Introduced the possibility to remember the Key Properties which can be enabled by setting "Key Properties Persistent" option to true. Default is false.
- **Sony CNA-2 [1.0.9.0]**
 - Worked on matrix offset. It may require a reconfiguration of the matrix offset for existing CNA-2 drivers.
 - Added a handler to ignore unconfigured CNA-2 domains to reduce the amount of traffic and error messages in the logfile. The driver remembers the configured domains and ignores all unconfigured domains. A refresh of the domains can be issued by executing the "Refresh Domains" parameter on the root level.
- **Sony CNA-2 [1.0.8.0]**
 - [RNDVSM-51282] Added *LensExtender* parameter to Cameras.

Software-Download

The latest VSM software release versions can be downloaded from the Lawo Download Center @ <https://lawo.com/lawo-downloads>.

As always, **before updating, backup your system and refer to the changelogs/release notes** of each component to see if your system can be updated. Please also make sure to check and understand all changes, as well as any known issues that may be stated in the changelogs. A backup of the VSM directory is recommended before upgrade.
