Virtual Studio Manager – VSM

vsmGadgetServer Release 5.6.3.176

Author: STB
Last updated: 2026-11-02
Release Date: 2026-11-02

This Release introduces new driver implementations, enhancements, and/ or fixes for the vsmGadgetServer application. Please consult the changelog for additional details.
Please note that vsmGadgetServer 5.6.3 and higher requires basic authentication (local windows user login) to access the configuration UI.

Also starting with **vsmGadgetServer release 5.6.3.107, new created Ember+ providers** will **have the "Single Binding" mode enabled by default.** This means that the provider will only send one binding at a time to the vsmGadgetServer. Also, **the binding alias will not be sent, so the root node of the consumer will become the root node of the provider!**
Please note that future versions may enforce a single Consumer<>Provider binding, therefore
the exclusive use of "Single Binding" mode is strongly recommended!

Including

- **Arista CVX [1.0.56.0]**
  - Work on optimizations when moving HOME Apps.
- **Arista CVX [1.0.55.0]**
  - Work on flow post optimizations.
- **Sony CNA-2 [1.0.20.0]**
  - [INC-56099] Work on reported issues.
- **WebUI**
  - Fixed reported logging issues.
  - Update dependencies.
- **Installer package**
  - From now on, only the vsmGadgetServer.Net service will be provided as installer package. The .NET Framework 4.8 and the Dante Services will not be included anymore. See the "vsmGadgetServer - Install Guide.pdf" for further information.

Software-Download

The latest VSM software release versions can be downloaded from the Lawo Download Center @ https://lawo.com/lawo-downloads.
As always, **before updating, backup your system and refer to the changelogs/release notes** of each component to see if your system can be updated. Please also make sure to check and understand all changes, as well as any known issues that may be stated in the changelogs. A backup of the VSM directory is recommended before upgrade.
