Virtual Studio Manager – VSM

vsmStudio Patch Release 24.2.2 (B2437)

Author: STB
Last updated: 2024-06-21
Release Date: 2024-06-21

This Patch Release includes important improvements and fixes, based on the latest vsmStudio Software Release 24.2.1. Please consult the changelog for additional details.

Including

- TP#41768 – Aggregated Tally was not resent when receiving parameter comes online.
- TP#41809 – Home parameter updates which were made when the parameter came online would not be sent to device.
- TP#41773 – Mixing different builds of vsmStudio in a cluster could cause a crash when a rotate target button's state was synchronized.
- TP#41774 – A button with the DAS keyword “connectedSource” would not be updated when the selected target changed.

Software-Download

The latest VSM software release versions can be downloaded from the Lawo Download Center @ <https://lawo.com/lawo-downloads>.

As always, **before updating, backup your system and refer to the changelogs/release notes** of each component to see if your system can be updated. Please also make sure to check and understand all changes, as well as any known issues that may be stated in the changelogs.

As upgrades may introduce a file format change [FFC], which implies incompatibilities of the configuration file of vsmStudio, please make sure to create a backup of your VSM directory before you upgrade.
