

## Release Information

# Virtual Studio Manager – VSM

## vsmStudio Release 25.2.1\_4 (B2492 Hotfix)

Author: STB  
Last updated: 2026-02-11  
Release Date: 2026-02-11

**Hotfix 25.2.1** – A hotfix is to be used exclusively to address a specific situation and may contain untested aspects both related and not related to the specific situation.

This Release introduces new features, enhancements, and fixes for the vsmStudio software. Please consult the changelog for additional details.

### Including

- RNDVSM-51151: Using “set movable” from network signal list would use wrong LLDP information.
- RNDVSM-51137: Deleted Comports might show up again after restart of vsmStudio.
- RNDVSM-51108: DAS might not trigger on certain condition.
- RNDVSM-50563: Possible crash when editing signals networking info.
- RNDVSM-51140: Possible crash when assigning visibility layers.
- RNDVSM-51150: Inbound port not honouring inbound restriction to specific remotes.
- RNDVSM-51153: Possible crash when disabling or deleting Communication Ports.
- RNDVSM-51155: In some cases, the Parameter Link Module would not forward a value change.
- RNDVSM-51162: Bulk-assigning ports in the signal network view to signals that were previously created without valid network information could lead to unexpected behavior.

### Software-Download

The latest VSM software release versions can be downloaded from the Lawo Download Center @ <https://lawo.com/lawo-downloads>.

As always, **before updating, backup your system and refer to the changelogs/ release notes** of each component to see if your system can be updated. Please also make sure to check and understand all changes, as well as any known issues that may be stated in the changelogs.

As upgrades may introduce a file format change [FFC], which implies incompatibilities of the configuration file of vsmStudio, please make sure to create a backup of your VSM directory before executing an upgrade.
