

VSM – PATCH RELEASE ANNOUNCEMENT

Version 16.1.1

AVAILABLE FEB 12TH 2016

CONTENT

We needed to deliver some urgent fixes for Release 16.1, which was published just a few days ago.

- Fixed: Initial GP-I/O synchronization.
- Fixed: Panel assignment control via gadget parameter no longer worked and could cause crash if used.

IMPORTANT NOTES & KNOWN ISSUES

- VSM
 - As Microsoft has officially ended the support for Windows® Server 2003 and Windows XP, the previous vsmStudio build B1978 is the last to support Windows® Server 2003, Windows® Server 2008 R1 and Windows® XP.
 - **From build B2006, vsmStudio will not run under Windows® Server 2003 & Windows® Server 2008 R1.**
 - Windows® Server 2012 is strongly recommended.
- GS5.4:
 - Telex RTS: When performing frequent changes the device may stop responding for a while.
 - HCI 1.0: yet not supported
 - HCI 2.0: routing yet not supported, Label Transfer via SWP08 not supported

PATCHED VERSIONS INCLUDED

- vsmStudio-B2108

SOFTWARE DOWNLOAD

In order to enable you to upgrade systems with the latest version, this release can be downloaded from our online repository. As always, before updating, refer to the **changelogs/release notes** to make sure your system can be updated.
