

VSM - RELEASE ANNOUNCEMENT

Version 16.1

AVAILABLE FEB 1ST 2016

CONTENT

Amongst various changes and fixes, Release 16.1 offers the following **enhancements**:

- GS5: Dante support. Please check Changelog for details.
- GS5: Lawo DMS - Added support for the card status swap (active, passive).
- vsmStudio: Double clicking on GP-IOs navigates through GP-IO configuration.
- vsmStudio: User assignable button attachment: Enabling this option allows the user to change the button's attachment. Unlike the mimic button, which mimics the entire other button, this only copies the attachment from the other button (if compatible). This allows the operator to configure a panel during runtime.
- vsmPanel: support of HTML 5 in web browser page item
- GS5: Phase 1 protocol consolidation in GS5.4

IMPORTANT NOTES & KNOWN ISSUES

- VSM
 - As Microsoft has officially ended the support for Windows® Server 2003 and Windows XP, the previous vsmStudio build B1978 is the last to support Windows® Server 2003, Windows® Server 2008 R1 and Windows® XP.
 - **From build B2006, vsmStudio will not run under Windows® Server 2003 & Windows® Server 2008 R1.**
 - Windows® Server 2012 is strongly recommended.
- GS5.4:
 - Telex RTS: When performing frequent changes the device may stop responding for a while.
 - HCI 1.0: yet not supported
 - HCI 2.0: routing yet not supported, Label Transfer via SWP08 not supported

UPDATE ON PREVIOUSLY KNOWN ISSUES

The known issue regarding "POOLING" has been fixed. Systems using the Pooling functionality can be updated to **Release 16.1**.
